Historical Events - Data Dictionary

1. Source & Staging Overview

Item	Description
Staging Table Name	historical_events
Target Database	DevelopmentBD
Purpose	Stores discrete historical, political, economic, social, and geopolitical events used to provide contextual information for longitudinal economic and development analysis.
Total Rows	**386** (*)
Distinct Entities	**16 Entities** (15 European Countries + EUU European Union)
Overall Year Span	**1900–2025** (110 distinct event years)
Unit of Observation	One documented historical event associated with one entity and one calendar year
Primary Key	Surrogate: event_id INT AUTO_INCREMENT
Audit Tracking	loaded_at TIMESTAMP DEFAULT CURRENT_TIMESTAMP

(*) *The initial file contained 387 records, however, one of them was malformed and, therefore, rejected*.

2. Table Schema & Column Specifications

Column Name	MySQL Data Type	Key Type	Nullable	Description

event_id	INT	**PK** (AUTO_INCREMENT)	NOT NULL	Surrogate primary key automatically generated by MySQL
year	INT	—	NOT NULL	Year in which the historical event occurred (1900–2025)
country_iso3	CHAR(3)	—	NOT NULL	Standard 3-letter ISO code
country_name	VARCHAR(50)	—	NOT NULL	Full country or entity name
event	VARCHAR(255)	—	NOT NULL	Detailed textual description of the historical event
category	VARCHAR(50)	—	NOT NULL	Categorization (e.g., Political, Economy, Financial, War)
economic_impact	VARCHAR(100)	—	NOT NULL	Qualitative assessment of economic or social impact
loaded_at	TIMESTAMP	—	NOT NULL	Ingestion audit timestamp (auto-populated by MySQL)

Primary key. (country_iso3, year) is not unique. Adding event would make it unique, but it is a long text column and unwieldy as a key, so a surrogate AUTO_INCREMENT key (event_id) is used.

3. Geographic & Entity Coverage Breakdown

Entity Name	ISO3	First Year	Last Year	Distinct Event Years	Total Event Records
Belgium	BEL	1900	2020	15	15
Czechia	CZE	1918	2020	17	17
Germany	DEU	1900	2020	22	22
Spain	ESP	1900	2020	19	19
Estonia	EST	1900	2020	21	21
European Union	EUU	1957	2007	5	5
France	FRA	1900	2020	19	19
Greece	GRC	1900	2020	19	19
Hungary	HUN	1900	2020	16	16
Ireland	IRL	1900	2020	17	17
Italy	ITA	1900	2020	17	17
Lithuania	LTU	1900	2020	17	17
Latvia	LVA	1900	2020	19	19
Poland	POL	1900	2020	21	21
Portugal	PRT	**1900**	**2025**	**88**	**125**
Romania	ROU	1900	2020	18	18

4. Event Categories

The category field classifies events using short thematic labels. Observed categories include:

Category	Number of Records
Political	102
Economy	89
War	39
Integration	40
Financial	32
Infrastructure	31
Industry	20
Geopolitical	13
Social	10
Colonial	5
Combined categories	4

Combined categories comprise events assigned with more than one category, such as Infrastructure/Economy or War/Health.

5. Data Quality and Limitations

Completeness

- The core fields year, country_iso3, country_name, and event are fully populated. However, the dataset is event-based and sparse.

Temporal coverage

- Across the full 1900–2025 span (126 years), only 110 years contain events, leaving 16 years with no recorded events for any country.

Asymmetry

- Portugal accounts for 125 of the 387 total event records (more than 30%), while the remaining 15 entities range between 5 and 22 events each. This imbalance aligns with the project scope: Portugal is the primary focus country.

Temporal alignment

- The event table begins in 1900, whereas the WDI indicators begin in 1960.
