Maddison Project Database - Data Dictionary

1. Source & Staging Overview

Item	Description
Staging Table Name	maddison_indicators
Target Database	DevelopmentDB
Purpose	Stores annual macroeconomic indicators for the selected European countries.
Total Rows	**4,349**
Distinct Entities	**15 European Countries**
Distinct Indicators	**3 Metrics** (gdp, gdppc, pop)
Overall Year Span	**1900–2022** (123 distinct years)
Unit of Observation	Country–Indicator–Year
Primary Key	Composite: (country_iso3, indicator_code, year)
Audit Tracking	loaded_at TIMESTAMP DEFAULT CURRENT_TIMESTAMP

The Maddison dataset provides the longest historical coverage among the project's quantitative sources, beginning in 1900 for several countries and extending through 2022. However, coverage is not uniform across countries. Some countries have shorter historical series or internal gaps.

2. Table Schema & Column Specifications

Column Name	MySQL Data Type	Key Type	Nullable	Description
country_iso3	CHAR(3)	**PK**	NOT NULL	Standard 3-letter ISO country code
country_name	VARCHAR(50)	—	NOT NULL	Full country name
indicator_code	VARCHAR(50)	**PK**	NOT NULL	Short metric identifier (gdp, gdppc, pop)
indicator_name	VARCHAR(100)	—	NOT NULL	Full descriptive title of the economic metric
year	INT	**PK**	NOT NULL	Observation year (1900–2022)
value	DECIMAL(24,6)	—	NOT NULL	Numerical value of the indicator
loaded_at	TIMESTAMP	—	NOT NULL	Ingestion audit timestamp (auto-populated by MySQL)

3. Indicator Definitions & Units

Indicator Code	Indicator Name	Unit of Measurement	Target Fact Table
gdp	Gross Domestic Product	Real 2011 International $	FACT_ECONOMY
gdppc	Real GDP per capita	Real 2011 International $ per person	FACT_ECONOMY
pop	Total Population	Thousands of inhabitants	FACT_SOCIETY

The following relationship was validated: GDP = GDP per capita × Population × 1000

4. Geographic Coverage

The staging table covers **15 European countries**:

- Belgium (BEL), Czechia (CZE), Germany (DEU), Spain (ESP), Estonia (EST), France (FRA), Greece (GRC), Hungary (HUN), Ireland (IRL), Italy (ITA), Lithuania (LTU), Latvia (LVA), Poland (POL), Portugal (PRT), and Romania (ROU).
- *Note*: Unlike the WDI and Events datasets, Maddison excludes the European Union (EUU) regional aggregate.

5. Temporal Coverage & Indicator Breakdown

The dataset spans **1900 to 2022** (123 distinct years).

Indicator Code	First Year	Last Year	Distinct Years	Total Rows
gdp	1900	2022	123	1,444
gdppc	1900	2022	123	1,461
pop	1900	2022	123	1,444

Although all three indicators have the same overall temporal span, the row counts indicate some country-year gaps.

6. Country-Level Breakdown & Historical Gaps

The following table summarizes the temporal coverage and number of observations available for each country across the three indicators.

Country Name	ISO3	First Year	Last Year	Distin. Years	Total Rows	Historical Notes
Belgium	BEL	1900	2022	123	369	Complete 123-year series
Czechia	CZE	1970	2022	53	159	Series begins in 1970

Germany	DEU	1900	2022	123	369	Complete 123-year series
Spain	ESP	1900	2022	123	369	Complete 123-year series
Estonia	EST	1973	2022	44	132	Series begins in 1973
France	FRA	1900	2022	123	369	Complete 123-year series
Greece	GRC	1900	2022	123	369	Complete 123-year series
Hungary	HUN	1900	2022	100	300	100 distinct years recorded
Ireland	IRL	1913	2022	103	309	Series begins in 1913
Italy	ITA	1900	2022	123	369	Complete 123-year series
Lithuania	LTU	1973	2022	44	132	Series begins in 1973
Latvia	LVA	1973	2022	44	132	Series begins in 1973
Poland	POL	1900	2022	89	267	89 distinct years recorded
Portugal	PRT	1900	2022	123	369	Complete 123-year benchmark series
Romania	ROU	1900	2022	123	335	123-year span with internal missing years

Countries such as Belgium, Germany, Spain, France, Greece, Italy and Portugal have complete observations for all three indicators across the 1900–2022 period.

Other countries have either: (i) shorter historical series, where observations begin after 1900; or (ii) internal gaps, where observations are absent for one or more years between the first and last available observations.

7. Missing information

The following countries contain internal gaps between their first and last recorded years:

Country	Indicators	Missing Years per Indicator

Estonia	gdp, gdppc, pop	6
Hungary	gdp, gdppc, pop	23
Ireland	gdp, gdppc, pop	7
Lithuania	gdp, gdppc, pop	6
Latvia	gdp, gdppc, pop	6
Poland	gdp, gdppc, pop	34
Romania	gdp, pop	17

8. Data Quality and Limitations

Completeness

- The profiling results indicate that all fields are fully populated. However there are some missing observations at country-year-indicator level.

Missing records

- Missing observations occur for specific countries and periods.
