Task 5: Events Explanation - Group 35

Analysis A: GDP per capita

In the first decade, in the 1900's we see the GDP per Capita is around 1997. The first relevant event we detected is in 1902: "Debt Crisis" and public finances collapse. In the late 1900's the GDP decreased, although we can't say it was a huge turning point.

The country wasn't getting major changes in the GDP per capita in the next decade. In 1926 the First Republic ended and in 1928 Salazar was appointed Minister of Finance. In 1933, the new regime was formalized. This contributed to a fiscal stabilization. From this point on, we see a significant increase (1870 -> 3325) in GDP per capita until 1950.

year	category	economic_impact	event
1920	Political	Economic chaos	Extreme political instability; rotating governments; chronic inflation and fiscal deficits
1924	Financial	Banking crisis	Banco de Portugal scandal; fraudulent banknote printing by Alves dos Reis
1926	Political	Regime change	Military coup (28 May); end of the First Republic; beginning of military dictatorship
1928	Economy	Fiscal stabilization	Salazar appointed Minister of Finance; imposes fiscal austerity and balanced budgets
1931	Economy	State-controlled industry	Condicionamento Industrial introduced; state licensing controls all industrial investment
1933	Political	Regime formalized	Constitution of the Estado Novo; corporatist authoritarian regime formally established
1935	Economy	Infrastructure investment plan	Lei de Reconstituição Económica; 15-year public investment plan; quadruples annual public investment
1938	Infrastructure	Aviation	Lisbon airport (Portela) construction initiated under Minister Duarte Pacheco
1940	Political	Symbolic investment	Exposition of the Portuguese World (Belém); double centenary celebrations; regime propaganda peak

In the decade of 1950 to 1960 there was a big increase in the GDP per capita. There was a revolution in energy development. In 1949 Portugal was a founding member of NATO. We can also see below in the image three historical events that contributed to energy expansion and industrial acceleration.

year	category	economic_impact	event
1945	Infrastructure	Road modernization	First motorway segment; A5 Lisbon to Estádio Nacional; Plano Rodoviário Nacional approved
1946	Infrastructure	Energy development	Hidroeléctrica do Zêzere and Hidroeléctrica do Cávado created; state hydroelectric companies
1949	Geopolitical	Western alignment	Portugal is a founding member of NATO (4 April); Marshall Plan aid received (1949-1950)
1950	Infrastructure	Healthcare	Hospital de Santa Maria construction begins; largest hospital in Portugal
1951	Infrastructure	Electrification milestone	Barragem de Castelo de Bode inaugurated (21 January); first major hydroelectric dam; powers Lisbon
1952	Industry	Petroleum refining	Refinaria de Cabo Ruivo (SACOR) begins operations; first oil refinery in Portugal
1953	Economy	Planned industrialization	I Plano de Fomento (1953-1958); first systematic development plan; energy transport and industry
1954	Colonial	Territorial loss	India annexes Dadra and Nagar Haveli; first loss of Portuguese India
1954	Industry	Heavy industry	Siderurgia Nacional founded (23 December); integrated steelworks project at Seixal
1954	Infrastructure	Energy expansion	Barragem do Cabril inaugurated; Zêzere hydroelectric cascade continues
1955	Infrastructure	Energy expansion	Barragem da Bouçã inaugurated; Zêzere hydroelectric cascade complete
1958	Infrastructure	Energy expansion	Barragem de Picote inaugurated; Douro international hydroelectric development
1958	Political	Opposition challenge	Humberto Delgado presidential candidacy challenges regime; election manipulated by Estado Novo
1959	Economy	Industrial acceleration	II Plano de Fomento (1959-1964); accelerated industrialization; petrochemicals steel and shipbuilding
1959	Infrastructure	Urban transport milestone	Lisbon Metro inaugurated (29 December); Y-shaped line with 11 stations

Later, we see the effects of this, with the average GDP per capita going from 3, 858.50 to 6, 236.20 in the decades of 1950 and 1960.

Through the years the GDP per capita increases, but there's an interruption of this tendency.

In 1975 there's the end of the Colonial war and 500,000 to 1 million Portuguese returned from the colonies. In this year a drop in the GDP is registered as we can see in the image below.

Year	1971	1972	1973	1974	1975	1976	1977
Country	GDP per Capita	GDP per Capita	GDP per Capita	GDP per Capita	GDP per Capita	GDP per Capita	GDP per Capita
Portugal	9,358.00	10,130.00	11,258.00	11,234.00	10,388.00	10,861.00	11,422.00

In the next year, 1976 the new Democratic Constitution was approved and in the next years GDP started growing again.
In 1986 Portugal joined the EEC and structural and cohesion funds started flowing. After this we can see another boost in GDP per capita for the following years.

Year	1982	1983	1984	1985	1986	1987	1988	1989
Country	GDP per Capita	GDP per Capita	GDP per Capita	GDP per Capita	GDP per Capita	GDP per Capita	GDP per Capita	GDP per Capita
Portugal	13,198.00	13,158.00	12,894.00	13,240.00	13,774.00	14,641.00	15,729.00	16,533.00

In 1999, Portugal adopts the Euro and in 2000 GDP per capita reaches 70% of EU-12 average.

In the decades of 2000 and 2010 the average values stayed the same for the decade.
In 2020 we registered another significant drop mainly because of COVID-19.

Year	2015	2016	2017	2018	2019	2020	2021	2022
Country	GDP per Capita	GDP per Capita	GDP per Capita	GDP per Capita	GDP per Capita	GDP per Capita	GDP per Capita	GDP per Capita
Portugal	24,983.70	25,568.70	26,530.00	27,329.70	28,056.10	25,700.30	27,138.50	28,992.10

Country	Portugal
Decade	GDP per Capita
1900	1,997.10
1910	1,949.70
1920	2,297.80
1930	2,679.00
1940	2,976.80
1950	3,868.60
1960	6,236.20
1970	10,740.10
1980	13,892.30
1990	19,552.67
2000	24,399.78
2010	25,583.82
2020	27,276.97

Analysis B: GDP, GNI per capita and Life expectancy

- Western Europe vs Portugal since 1975

In this analysis we look at GDP, GNI per capita and Life Expectancy of all the western european countries and Portugal as it is in the image below (more countries were taken into consideration than the ones that appear in the image).

Country	Portugal			France			Germany		
Decade	GDP	GNI per Capita	Life Expectancy	GDP	GNI per Capita	Life Expectancy	GDP	GNI per Capita	Life Expectancy
1980	137,303,463,776	3,707.00	72.78	1,411,380,107,400	13,093.00	75.18	1,872,336,318,129	13,062.00	74.04
1990	195,160,217,976	10,585.00	74.94	1,752,657,453,815	24,377.00	77.69	2,320,146,724,970	26,994.00	76.38
2000	253,695,212,470	16,976.00	77.71	2,209,288,899,830	33,069.00	80.16	2,973,829,457,834	33,900.00	78.85
2010	264,206,196,129	21,531.00	80.83	2,473,636,564,157	42,152.00	82.37	3,620,086,050,465	47,376.00	80.73
2020	278,539,477,029	25,830.00	81.80	2,571,661,914,015	44,926.67	82.48	3,831,125,205,088	54,550.00	80.84

1975-1985:
Portugal's GDP fell 4.4% in 1975, against 0.4% for the group. The events file records the nationalisations, the agrarian reform, the independence of the African colonies and the return of 500,000 to 1 million settlers, all in 1975. It

rebounded 6.9% in 1976, the year of the new constitution. The second IMF bailout (1983) coincides with −0.2% in 1983 and −1.9% in 1984, while the group grew 1.4% and 2.2%. Even so, Portugal grew faster than the group over the decade (2.97% against 2.42%). Spain's democratic transition (Franco's death in 1975, the Moncloa Pacts and the 1978 constitution) came with 2.36% a year. Ireland's entry to the European Monetary System (1979) coincides with the group's fastest growth (3.55%). Greece's EEC accession (1981) coincides with growth of only 0.1% that year. The file has no events for the dips in Belgium (1981) or Germany (1982).

1985-2000:
Portugal grew 4.08% a year against 2.82% for the group, and its share rose from 2.36% to 2.84%. Portugal and Spain joined the EEC together in 1986. Portugal then grew above 3.7% every year until 1991 (peak +7.5% in 1988), and Spain's peak was +7.2% in 1987. This coincides with Cavaco Silva's liberalisation agenda (1986), the reprivatisation reforms (1989–90) and Autoeuropa and the A1 motorway (1991). Ireland grew fastest (7.14%) as the Celtic Tiger boom began in 1990. German reunification (1990) coincides with −2.9% in 1990 and +6.2% in 1991, partly a statistical effect. The 1993 contraction (−0.3% for both Portugal and the group) follows Maastricht and Italy's lira crisis, plus the Lisnave restructuring in Portugal. The phase closes with euro adoption (1999) and public investment such as the Vasco da Gama bridge and Expo 98. In 2000 Portugal's GDP per capita reached 70% of the EU-12 average, which the dataset calls the "convergence high-water mark".

2000-2008:
Portugal grew 1.47% a year against 2.47% for the group, and its share fell to 2.62%. The Portuguese events are industrial closures (Lisnave 2000, Siderurgia Nacional 2001) and the start of the "lost decade" in 2003, when Portugal shrank 0.5% while Spain grew 4.1%, Ireland 4.9% and Greece 6.7%. The fast growers have events of their own: Spain's housing boom (its 2008 burst is in the file), Greece's euro entry and Olympics, Germany's Agenda

2010 reforms (2003) and Ireland's multinationals. Greece overtook Portugal in 2003.

2008-2013:
Over these five years Portugal's GDP fell 6.6%, Spain's 6.4%, Italy's 5.6% and Greece's 23.5%, while Germany's rose 6.3%. The 2008 events cover bank rescues in Belgium, France and Ireland, Germany's export contraction and the Spanish housing crash. In 2009 all eight economies contracted (Portugal −2.6%). Germany then rebounded (+5.2% in 2010) while Greece (first bailout, 2010) kept falling. Portugal's 2010 deficit of about 11% of GDP and its 2011 bailout coincide with −1.4% in 2011 and −4.1% in 2012, its worst year outside 2020. Spain's 2012 bank bailout and Italy's 2011 debt crisis coincide with −3.0% each in 2012. Portugal's share fell to 2.45% and unemployment peaked at about 16%.

2013-present:
Portugal grew 1.87% a year against 1.22% for the group, and its share recovered to 2.60%. After exiting the bailout in 2014 (the year Banco Espírito Santo collapsed), the 2015 policy reversal, the 2016 tourism boom and the 2019 budget surplus coincide with growth of 1.8%, 2.0% and 2.7%. In 2020 every country contracted: Portugal fell 8.3%, less than Spain (−11.3%), Italy and Greece (−9.0%), and more than France (−7.8%), Ireland (−6.7%), Belgium (−5.4%) and Germany (−3.7%). The 2021 rebound (+5.5%) and the €16.6 billion Recovery and Resilience Plan come before 6.7% growth in 2022, which leaves Portugal 3.2% above 2019 and Spain 1.3% below.

- Eastern Europe vs Portugal since 1990

In this analysis we look at GDP, GNI per capita and Life Expectancy of all the eastern european countries and Portugal as it is in the image below.

Country	Portugal			Estonia			Latvia			Lithuania		
Year	GDP	GNI per Capita	Life Expectancy	GDP	GNI per Capita	Life Expectancy	GDP	GNI per Capita	Life Expectancy	GDP	GNI per Capita	Life Expectancy
1990	171,225,929,203	7,130.00	74.00	27,066,096,904	-	69.50	42,100,704,929	-	69.30	51,021,989,460	-	71.20

Latvia events:

year	category	economic_impact	event
1991	Political	State restored	Restoration of independence (21 August) during the Soviet coup
1992	Economy	Currency reform	Latvian rublis then lats currency reform; rapid liberalization
1995	Financial	Banking crisis	Banking crisis; collapse of Banka Baltija
2004	Integration	EU and NATO membership	Latvia joins the European Union (1 May) and NATO
2008	Financial	Severe recession	Severe financial crisis; GDP falls about 18%; internal devaluation
2014	Integration	Monetary union	Latvia adopts the Euro (1 January)
2020	Economy	Pandemic shock	COVID-19; GDP contracts then rebounds

Estonia events:

year	category	economic_impact	event
1991	Political	State restored	Re-independence of Estonia (20 August); sovereignty restored during Soviet coup
1992	Economy	Currency reform	New constitution; Estonian kroon introduced replacing Soviet ruble; radical monetary reform
1994	Economy	Liberal reforms	Radical economic reforms; flat tax introduced; rapid privatization; e-government pioneer
2004	Integration	EU and NATO membership	Estonia joins the European Union (1 May) and NATO (29 March)
2007	Integration/Security	Digital vulnerability	Estonia joins Schengen Area; cyberattacks from Russia target Estonian infrastructure
2008	Financial	Severe recession	Global financial crisis; GDP contracts sharply after overheated growth
2011	Integration	Monetary union	Estonia adopts the Euro (1 January); first former Soviet republic in the Eurozone
2020	Economy	Pandemic shock	COVID-19; GDP contracts ~3%; digital infrastructure helps remote work

Lithuania events:

year	category	economic_impact	event
1990	Political	Independence path	Act of the Re-Establishment of the State (11 March); first Soviet republic to declare independence
1991	Political	State restored	January Events in Vilnius; independence recognized after the Soviet coup
1993	Economy	Currency reform	Litas reintroduced; last Russian troops leave
2004	Integration	EU and NATO membership	Lithuania joins the European Union (1 May) and NATO
2008	Financial	Severe recession	Global financial crisis; deep recession and emigration wave
2015	Integration	Monetary union	Lithuania adopts the Euro (1 January)
2020	Economy	Pandemic shock	COVID-19; relatively mild GDP contraction

After taking a look at these countries' events, we see they all have one thing in common: independence. After 1991, all 3 re-established their states and the GDP drastically dropped in the following years. In 1995, Latvia had a Banking Crisis and we noticed a drop in the life expectancy too that may be associated with the conflicts with the russian.

In Lithuania, for example, we see that Russian troops leave in 1993 and coincides with a slight drop in life expectancy.

Then, in 2004 these countries joined the European Union and NATO, which might have helped increase GDP and GNI per capita as we see in the table. This tendency didn't last long because, in 2008, there was a global financial crisis, deep recession and emigration wave that affected all countries. GDP and GNI per capita dropped in Portugal and in the Eastern Europe countries. It took all of the countries several years to recover from the crisis. From 2015 to 2022 GDP and GNI increased in Latvia, Estonia and Lithuania.
In Portugal, on the other hand, in 2013 there was the crisis peak and in 2014 a banking crisis (Banco BES) and consequently GNI per capita dropped for 2/3 years.

Analysis C: agriculture, industry, manufacturing and services as a share of added pct GDP

In the image below we see the value added pct GDP per sector and broad sector in Portugal.

Year		1995	1996	1997	1998	1999	2000	2001	2002	2003	2004	2005	2006	2007	2008	2009	2010
Broad Sector	Sector	Value Added Pct GDP	Value Added Pct GDP	Value Added Pct GDP	Value Added Pct GDP	Value Added Pct GDP	Value Added Pct GDP	Value Added Pct GDP	Value Added Pct GDP	Value Added Pct GDP	Value Added Pct GDP	Value Added Pct GDP	Value Added Pct GDP	Value Added Pct GDP	Value Added Pct GDP	Value Added Pct GDP	Value Added Pct GDP
Primary	Agriculture	4.80	4.60	3.80	3.50	3.30	3.10	3.00	2.70	2.70	2.60	2.30	2.30	2.00	2.00	2.00	1.90
Secondary	Industry	24.80	25.40	25.70	25.30	24.90	24.50	24.10	23.50	22.60	22.20	21.40	21.10	21.20	20.40	19.90	19.90
	Manufacturing	15.90	16.60	16.50	16.00	15.60	15.00	14.70	14.20	13.50	13.10	12.60	12.30	12.20	11.90	11.10	11.60
Tertiary	Services	58.50	57.80	58.40	58.60	59.00	60.00	60.60	61.20	62.10	62.60	63.00	62.90	63.50	64.80	66.80	66.00

Decade		1990	2000	2010	2020
Broad Sector	Sector	Value Added Pct GDP	Value Added Pct GDP	Value Added Pct GDP	Value Added Pct GDP
Primary	Agriculture	4.00	2.47	1.94	2.05
Secondary	Industry	25.22	22.09	19.27	18.80
	Manufacturing	16.12	13.06	11.88	12.02
Tertiary	Services	58.46	62.75	65.87	66.02

If we take an overall look at the progression of these values we see Agriculture decrease and also the Industry and Manufacturing. The tertiary sector (services) is the one presenting more percentual value added to GDP through the decades.

This is due to the deindustrialization and tertiarization of the Portuguese economy, which the events data places in the late 1990s and 2000s. Services rose from 58.5% of GDP in the 1990s to 62.7% in the 2000s and about 66% from the 2010s onward, while industry fell from 25.2% to 22.1% and then 19.3%, and manufacturing from 16.1% to 11.9%.

The events data points to several factors behind the industrial decline. In 2000 the Lisnave Margueira shipyard closed, marking the “end of Portuguese heavy shipbuilding”, and in 2001 the Siderurgia Nacional blast furnace was

shut down, ending integrated steelmaking in Portugal; both are labelled “Deindustrialization” in the dataset. The economic stagnation that began in 2003, followed by the 2008 financial crisis, the 2010 debt crisis and the 2011 bailout, kept pressure on industrial activity, and the share of industry never recovered its 1990s level. Not everything moved in the same direction: the start of production at Autoeuropa in 1995 made automotive the top export sector and helps explain why manufacturing remained above 11% of GDP.

The growth of services is consistent with the tourism-led growth that accelerated from 2016 and with the Web Summit moving to Lisbon in 2018, and also with the fact that the sector was less exposed to the closures above. Agriculture fell from 4.0% to about 2% of GDP and has been stable since 2010; this continues a shift that the events data already places in 1960, when the industrial sector surpassed agriculture for the first time. The completion of the Alqueva dam in 2002 transformed irrigation in the Alentejo, but its effect is not visible in the aggregate share.

In the following screenshot we see the events in Portugal mentioned previously. We obtained the following table using this query:

```
SELECT t.year, e.category, e.economic_impact, e.event

FROM BRIDGE_EVENT e

JOIN DIM_COUNTRY c ON c.country_key = e.country_key

JOIN DIM_TIME    t ON t.time_key    = e.time_key

WHERE c.iso3_code = 'PRT'

AND t.year BETWEEN 1990 AND 2020

ORDER BY t.year, e.event_key;
```

year	category	economic_impact	event
1998	Infrastructure	Urban transformation	Expo 98 in Lisbon; Parque das Nações opens; massive urban regeneration of eastern Lisbon
1998	Infrastructure	Transport milestone	Ponte Vasco da Gama inaugurated (29 March); 17.2 km cable-stayed bridge over Tagus
1998	Infrastructure	Urban transport expansion	Lisbon Metro Red Line inaugurated (May); serves Expo 98; Green and Blue lines extended
1999	Integration	Monetary union	Portugal adopts the Euro; founding Eurozone member (1 January)
2000	Economy	Convergence high-water…	GDP per capita reaches 70% of EU-12 average; unprecedented convergence peak
2000	Industry	Deindustrialization	Lisnave Margueira closes (31 December); end of Portuguese heavy shipbuilding
2001	Industry	Deindustrialization	Siderurgia Nacional blast furnace closed (31 March); end of integrated steelmaking in Portugal
2001	Infrastructure	Culture investment	Porto European Capital of Culture; Casa da Música and urban regeneration
2002	Economy	Monetary milestone	Euro banknotes and coins enter circulation (1 January)
2002	Infrastructure	Water and agriculture tra…	Barragem de Alqueva completed; largest artificial lake in Europe; transforms Alentejo irrigation
2003	Economy	Lost decade begins	Economic stagnation begins; GDP growth near zero; divergence from EU average starts
2004	Infrastructure	Event investment	Euro 2004 football championship hosted; new stadiums and transport infrastructure
2004	Industry	Energy	Galp Energia formed from merger of Petrogal and GDP; energy sector consolidation
2004	Infrastructure	Metro expansion	Lisbon Metro expands to Odivelas and Amadora Este
2005	Economy	Budget discipline	Stability and Growth Programme; fiscal consolidation under Sócrates government; Simplex programme
2007	Infrastructure	Cancelled megaproject	TGV high-speed rail project announced (Lisbon-Madrid); later cancelled due to crisis
2008	Financial	Recession begins	Global financial crisis hits; GDP peaks in Q1 2008 then contracts
2009	Infrastructure	Metro network complete	Lisbon Metro Red Line extended to São Sebastião; network reaches 4 fully independent lines
2010	Financial	Debt crisis	Fiscal deficit reaches ~11% of GDP; sovereign bond yields spike to double digits
2011	Financial	Bailout	Troika bailout (May); EU/ECB/IMF programme of EUR 78 billion; severe austerity measures
2012	Infrastructure/Eco…	Airport link; market libera…	Lisbon Metro Red Line extended to Aeroporto; golden shares in EDP Galp PT revoked
2013	Social	Crisis peak	Unemployment peaks at ~16%; highest since democracy
2014	Financial	Recovery begins	Portugal exits the bailout programme (June); without precautionary credit line
2014	Financial	Banking crisis	Banco Espírito Santo collapses; resolved into Novo Banco (August)
2015	Political	Policy shift	Left-wing coalition government (Geringonça); reverses some austerity; raises minimum wage
2016	Economy	Tourism-led growth	Tourism boom accelerates; Portugal wins multiple international tourism awards
2017	Social	Natural disaster	Deadly wildfires in Pedrógão Grande (June) and central Portugal (October); 115+ deaths
2018	Economy	Tech and innovation	Web Summit moves permanently to Lisbon; tech ecosystem visibility
2019	Economy	Fiscal milestone	First fiscal surplus since democracy; public finances positive for first time
2020	Economy	Pandemic shock	COVID-19 pandemic; GDP contracts sharply; tourism collapses temporarily
